ThreadStone
CYBER SECURITY

Your company protected against cybercrime

SMEs are 'easy prey' for cyber criminals

Which entrepreneur doesn't sometimes become aware of the trouble a burglary in his company would cause? Solid locks on doors and windows, security cameras, proper outside lighting – these kinds of measures are obvious.

But also your website, CMS system, passwords, confidential e-mail, security cameras, checkout systems: each device that is connected to the Internet allows criminals to access your company. Hackers and cyber criminals are becoming increasingly resourceful. And more and more frequently they consider SMEs a lucrative victim, because this sector has relatively little time and means for system security and testing. There can be substantial damage and it can have troublesome consequences, also for your customers. By now the financial impact of cybercrime in Europe is estimated at an amount of 290 billion euro.

It is not without reason that the European privacy legislation is becoming increasingly strict: entrepreneurs can even be fined for negligence in protecting their confidential data.
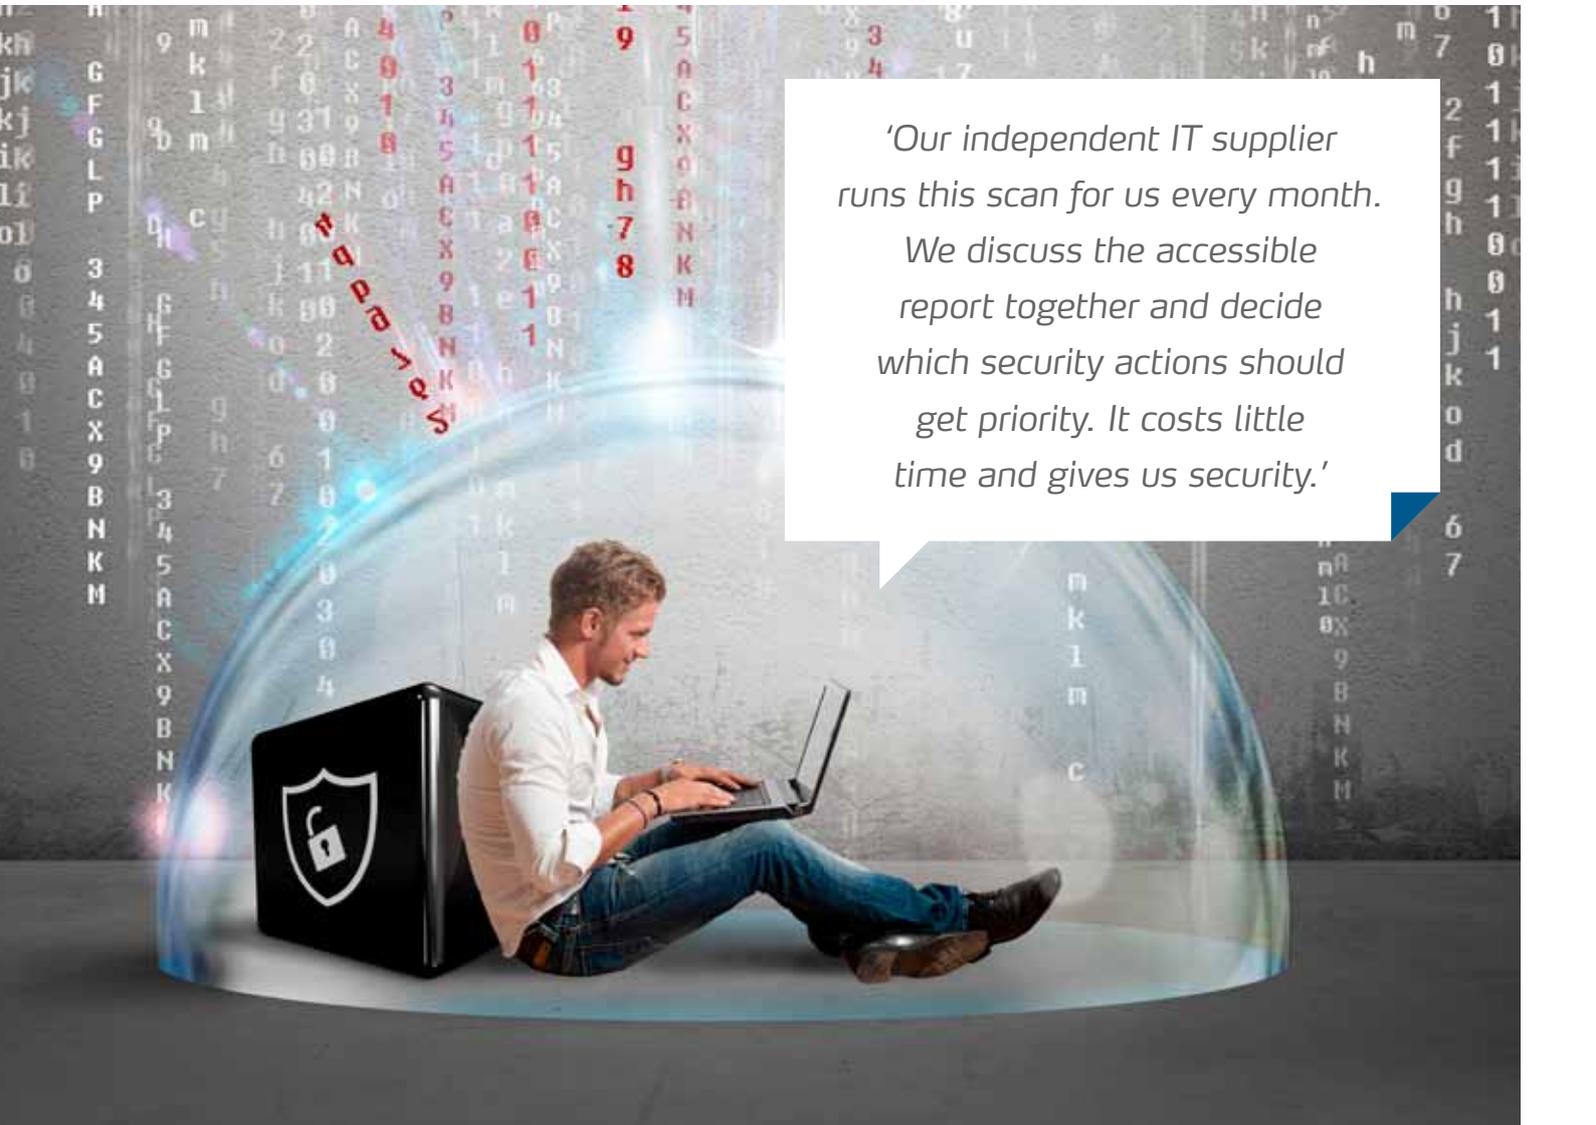

'Our independent IT supplier runs this scan for us every month. We discuss the accessible report together and decide which security actions should get priority. It costs little time and gives us security.'

ThreadStone
Offers you protection

With our complete, fully automated ThreadScan we offer your company optimal security control of your systems and devices, which are connected to the Internet. For a fixed and attractive price.

The ThreadScan is a periodical scan, which you take out as a monthly subscription. Weekly, monthly or quarterly your systems will be tested, so that they stay optimally protected against cyber criminals. This is necessary for an optimal protection: on average 500 new vulnerabilities are discovered in hardware and software monthly. You do not have to purchase an expensive system or hire a special advisor: we offer the ThreadScan in cooperation with your regular IT partner, who knows your business situation well. Together with him you decide which scan is the most suitable for your business and which actions are necessary as soon as the periodical ThreadScan has been completed.

What makes our **ThreadScan** unique?

Thread Scan
ONLINE SECURITY

⊕ Control of the security of your confidential data
Our advanced scanning method checks on fixed, predetermined moments whether you run the risk of a break-in through devices connected to the Internet. Your website, your mailing system, checkout system, CMS database etc. can be tested weekly, monthly or quarterly. Our system is expanded daily to include the latest global threats and vulnerabilities.

⊕ Works for all systems and devices
Existing scanning methods are often limited because they can only run on one operating system. Our ThreadScan is comprehensive: all systems and devices connected to the Internet can be included in the scan. Everything runs in silent modus so that you will be unaware of it.

⊕ Online and fully automated
Our scanning process is fully automated and is accessible through a portal, from the European cloud. This way you will not need expensive hardware and we are able to keep the costs as low as possible. You only pay fixed subscription fees monthly (available from € 9,75), without additional installation charges.

⊕ Targeting vulnerabilities
After each scan a user-friendly, clear security report is compiled, including advice for possible solutions. Moreover, vulnerabilities that have been identified are allocated a status in the report. This way, you can immediately see which changes have taken place in relation to the previous scan. You get valuable management information and your external IT supplier or your own IT department can start to work with it right away.

⊕ Cooperation with your trusted IT partners
ThreadStone works together with IT service providers in the field of hosting, web design, system management etc. So we do not employ expensive consultants, but make use of the strength of existing relations. If your own IT supplier is not yet working with ThreadStone, then we will make sure that they receive all the necessary information. Please visit out website for this.

⊕ Award-winning Dutch quality product
ThreadStone has won the first price of the HSD Development Fund. Our security scan is continually developed and tested extensively in cooperation with TNO. The goal? Guaranteed high standard of quality. We are continually adjusting our product, so that you as SME are always protected optimally.

'For my relatively small company this accessible, competitively priced, security scan is perfect. More so because Internet criminals know that SMEs can be an easy prey.'

'After the first scan we found out that our database of customer data was open. We were ompletely unaware of this! ThreadStone has averted greater damage.'

About us

After an intensive period of preparation ThreadStone Cyber Security entered the market in 2015 with an innovative, unique vulnerability scan for SMEs. Specifically these companies have little time and means to properly manage their system and data security, yet they are more frequently becoming a target for cyber criminals. To be able to guarantee a state of the art product, we work together with renowned partners, such as TNO. ThreadStone is located in the largest security cluster in Europe The Hague Security Delta Campus in The Hague.

Our IT Security specialists are in possession of the following certifications:

- EC Council Licensed Penetration Tester
- Certified Ethical Hacker
- Certified Computer Hacking Forensic Investigator
- ISC2 Certified Information Systems Security Professional
- ISO 27001.
